

On-premises SQL to Azure Synapse Analytics in 30 days

Migrate SQL workloads to Azure Synapse Analytics and demonstrate one predefined use case within 30 days or less with Neal Analytics. This offer leverages predefined procedures and templates to provide customers with a quick and cost-effective way to move their SQL workloads to the cloud.

Why SQL to Synapse in 30 days

Rapid implementation

Customers can take advantage of Neal's accelerator IP and deep expertise with SQL and Synapse to achieve a rapid, cost-effective migration from SQL Server to Azure Synapse Analytics.

Predefined templates

Predefined templates used by Neal ensure migrations and databases built and scaled out leveraging a consistent, proven architecture. Using templates also removes guesswork, research, and potential errors, resulting in a more rapid time to value.

Implementation best practices

Following industry best practices for implementing Azure Synapse Analytics not only means customers will receive a quality, fully functional database, but they will also receive the knowledge transfer and documentation necessary to self-sufficiently manage and further develop the database.

Platform expertise

Neal has been an exclusive Microsoft partner since our founding in 2011, and have helped deliver successful migration and modernization projects for dozens of Microsoft customers. In fact, Microsoft's confidence in Neal Analytics as a partner has led to Neal helping develop several of Microsoft's leading Azure solutions today.
